

ServiceNow Script-Controlled ACL Project

Module 4 – CREATE ACL

Lab duration: 3 hours | Development/Training Instance

Objective

Allow users with bb2 to create records while the READ ACL continues to control which existing records they can view.

ACL Creation

Create a new record ACL with:

Type: **record**

Operation: **create**

Name: **u_institution_details**

Active: **true**

Requires role: **bb2**

No data condition is required for this CREATE ACL.

Verification

Assign bb1 and bb2 to EEE User. Open the Institution Details list. The user should retain READ restrictions from the READ ACL and should have the ability to use the **New** action when the CREATE ACL passes.

Expected Result

bb1 controls the read-stage restriction; bb2 supplies create permission. Existing-record visibility is not automatically granted by a CREATE ACL.
