

ServiceNow Script-Controlled ACL Project

Module 5 – WRITE ACL

Lab duration: 3 hours | Development/Training Instance

Objective

Allow users with bb3 to update records, while READ and CREATE permissions remain separately controlled.

ACL Creation

Create a record ACL with:

Type: **record**

Operation: **write**

Name: **u_institution_details**

Active: **true**

Requires role: **bb3**

No data condition is required for this WRITE ACL.

Verification

Assign bb1, bb2 and bb3 to EEE User. Open an allowed EEE record and confirm that the record can be edited.

Confirm that the New action remains available because bb2 passes CREATE.

Expected Result

The user can view permitted EEE records, create records, and edit records when the corresponding ACLs pass.
