

ServiceNow Script-Controlled ACL Project

Module 6 – DELETE ACL

Lab duration: 3 hours | Development/Training Instance

Objective

Allow users with bb4 to delete records while preserving the separate READ, CREATE and WRITE controls.

ACL Creation

Create a record ACL with:

Type: **record**

Operation: **delete**

Name: **u_institution_details**

Active: **true**

Requires role: **bb4**

No data condition is required for this DELETE ACL.

Verification

Assign bb1, bb2, bb3 and bb4 to EEE User. Open a permitted record and verify the Delete action. Test the operation carefully in a development instance so that required test records are not lost.

Expected Result

When all required ACLs pass, the user can view permitted records, create, edit and delete according to the ACL configuration.
